

CLEANER

WATERCLEAN

- Environmentally safe yet effective solvent-free alternative to solvent washing
- For the removal of surface contaminants from molds and molded parts
- Suitable for use on all surfaces including gelcoat
- May eliminate the need for sanding and/or solvent washing when preparing parts for painting, bonding or other processes that require a completely clean surface

SEALER

SEALBRITE

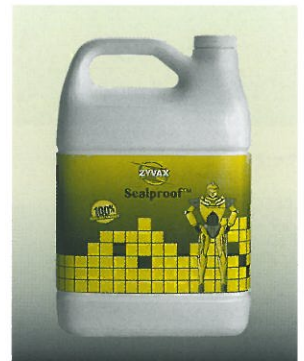

- Excellent mold conditioner for use when a Class A finish is desired
- Can be used on most surfaces including epoxy, Duratec®, carbon-graphite and gelcoat
- Provides a beneficial foundation for WaterShield and EnviroShield release agents

SEALPROOF

- Extremely durable surface conditioner for worn, damaged, oxidized and re-worked tooling
- Provides a hard non-glossy finish on most mold surfaces
- Also recommended for use on plugs and masters to seal porosity and other defects
- Provides a beneficial foundation for WaterShield and EnviroShield release agents

SEALMATTE

- Provides a lasting matte surface on otherwise glossy tooling
- Provides a beneficial foundation for WaterShield and EnviroShield release agents
- Applications include automotive, marine, transportation, architectural parts and windpower

RELEASE

WATERSHIELD

- Long lasting controlled release performance
- Suitable for abrasive or high-wear molding processes

ENVIROSHIELD

- Provides high slip multiple releases
- Superior surface finish with high gloss
- Recommended for RTM and applications where high slip is desired, such as mandrels for filament winding or flag wrapping

* All ZYVAX solvent-free products are completely odorless, non-hazardous, non-flammable, non-VOC and are thermally stable to 500°F, 250°C.

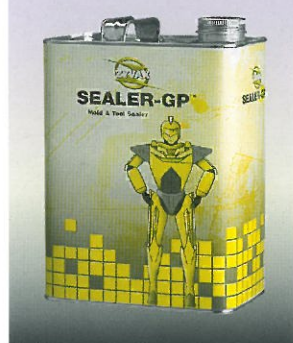

CLEANER

SURFACE CLEANER

- Custom blended cleaner for quick, efficient cleaning of molds and finished parts
- Readily removes waxes, semi-permanent release agents, gelcoat and styrene residue without harming or dulling the surface

SEALER

SEALER GP

- The ultimate mold conditioner designed to treat most physical anomalies found on all mold surfaces
- Quick and easy to apply
- Suitable for gelcoat, steel, aluminum, fiberglass, carbon-graphite and all types of composites
- Can be used in all molding applications including aerospace

RELEASE

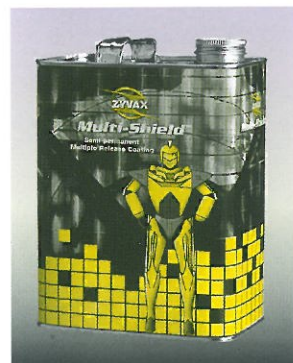

COMPOSITESHIELD

- Controlled release performance
- Suitable for all composites including polyester, epoxy and thermoplastics
- Applications include open and closed molding, vacuum bagging and autoclave processes as well as aerospace
- Useful whenever a tighter release is desired

FIBERGLASS SHIELD

- Provides a high gloss, Class A, finish for all types of gelcoated parts
- Applicable for use in the automotive, marine, architectural parts and transportation industries

MULTISHIELD

- Multiple release performance across a wide range of processes and materials
- Perfect for general purpose molding environments and for non-gelcoated parts

* All ZYVAX solvent-based coatings are thermally stable to 900°F, 482°C.
